

Acclipse ForecastIT

Easy cashflow budgeting straight from your client's GL

Acclipse ForecastIT enables accounting firms to be 'proactive' in creating cashflow budgets for ALL their clients, straight from their practice management ledgers*. Now every set of annual accounts can be accompanied with a set of 'future' accounts. It's a business service that accountants, bank managers and business owners really value.

Cashflow forecasting enables you to analyse and consult with your clients on major purchases, loans and other key business decisions. This valuable insight into your client's business enables you to work more closely with them and ensure they grow their business.

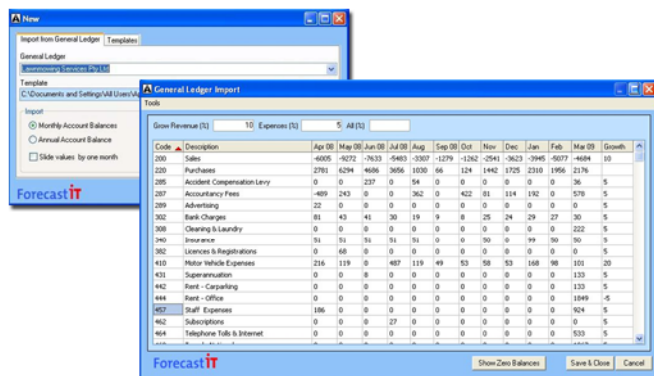

How Does Acclipse ForecastIT Work?

The key to success lies in integration and automation. By importing data directly from your general ledger and automating calculations, your forecast reports are created in considerably less time and with greater accuracy.

Create Forecasts & Import from Your Practice Ledger

You can create a forecast with one of the standard templates and enter data or import ledger data directly from *Acclipse Practice Manager, APS Advance, MYOB Accountants Office, MYOB/Solution 6 MAS or Sage HandiSoft.

Importing from client ledgers is a breeze once your master mapping is completed. And to make it even easier for you, Acclipse offers a comprehensive master mapping service.

When you import your data, you can apply growth rates across an entire forecast to quickly make a blanket change to data.

Entering & Editing Data

Entering and editing data is simple with the 'Explorer-like' tree navigation, an easy to understand grid and the 'All' or 'Total' functions, making it even easier to use than a spreadsheet.

You can also quickly drill down to view the properties of an individual account or code, add notes, link to other accounts, manipulate stock levels and much more!

Acclipse ForecastIT offers a lot of flexibility in developing specialised cashflow budgets for clients as you can link to Microsoft Excel for more complex calculations. Or if you want to calculate an item based on another item, Acclipse ForecastIT enables you to easily link to one or more other values. You can even apply formulas such as "XX percentage of..." - Pretty clever!

Automate Calculations

The final key to preparing informative, accurate cashflow reports efficiently is the ability to automate calculations as much as possible. Doing so not only saves you a lot of time but also greatly reduces the risk of human or spreadsheet errors.

Imagine being able to set up a cashflow report and have the income tax calculated automatically. Or how about having automatic calculations for GST by period and method, depreciation based on type and rate, stock usage, loans with term, interest rate & payment method, provisional and terminal tax payments - all completed for you!

Acclipse ForecastIT guides you through all aspects of preparing a powerful forecast, enabling you to focus on your client's future, not their past.
